

TDI HR Employee Attrition Analysis

Identifying key drivers of employee attrition

By Chime Chidinma Sylvia

PROBLEM STATEMENT

The core problem of this analysis is to uncover the reasons why employees are leaving the firm and what are the key factors across the dataset contributing to this attrition.

OBJECTIVES

- To determine whether certain age groups have higher attrition rates.
- To evaluate how marital status influences attrition.
- To compare the different levels of education and attrition.
- To examine whether employees with less stock option are more likely to leave.
- To ascertain if the year since last promotion is a trigger for employees to leave.

Attrition by Marital Status

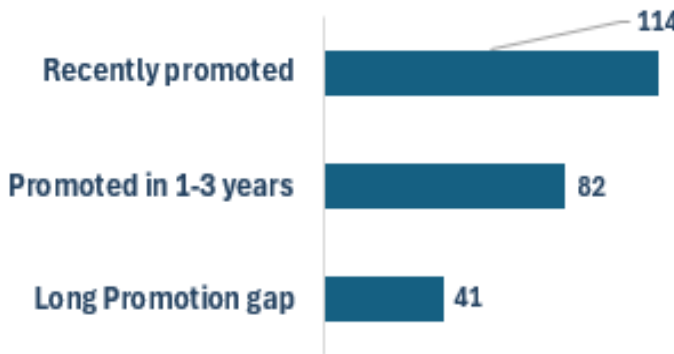

Attrition by Stock Option

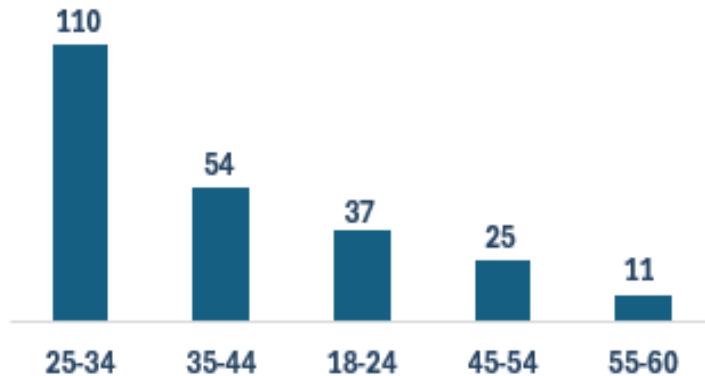

Attrition by Education

Attrition by Last Promotion

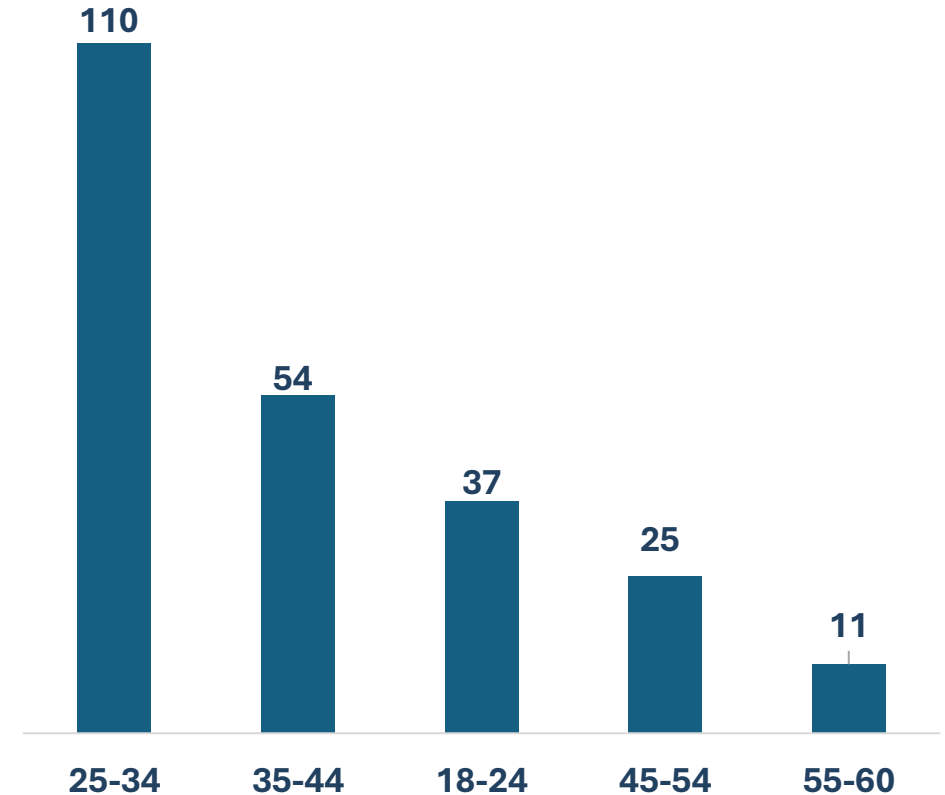

Age Group Attrition

INSIGHTS

- The 25-34 group records the highest employee exits
- Attrition declines in older age group
- Younger employees are more likely to explore new opportunities

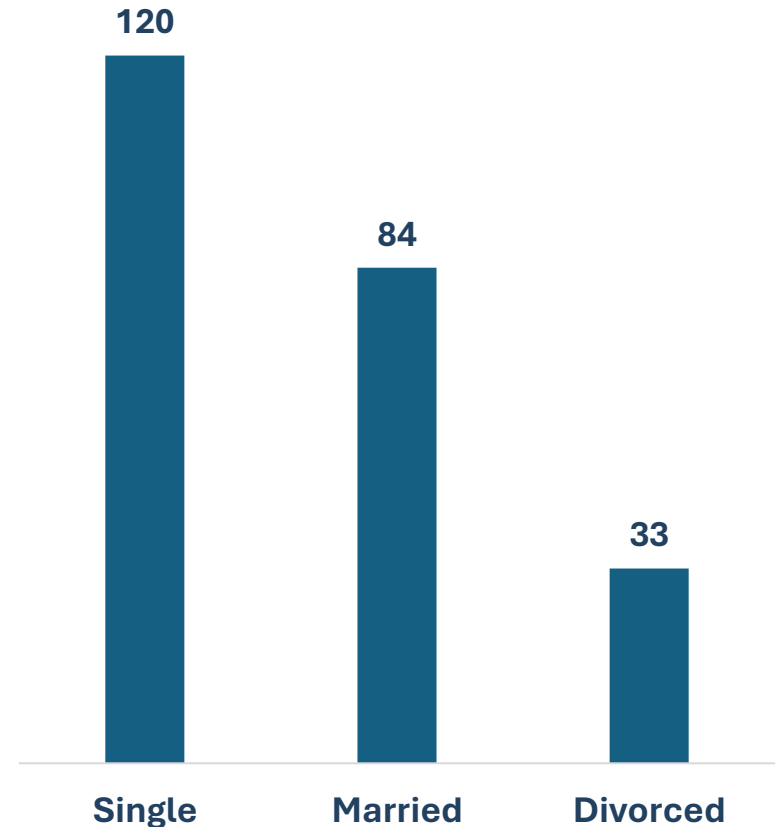

Age Group Attrition

INSIGHTS

- Single employees have the highest attrition rate
- Married employees appear more stable in the workforce
- Family commitments contribute to employee retention

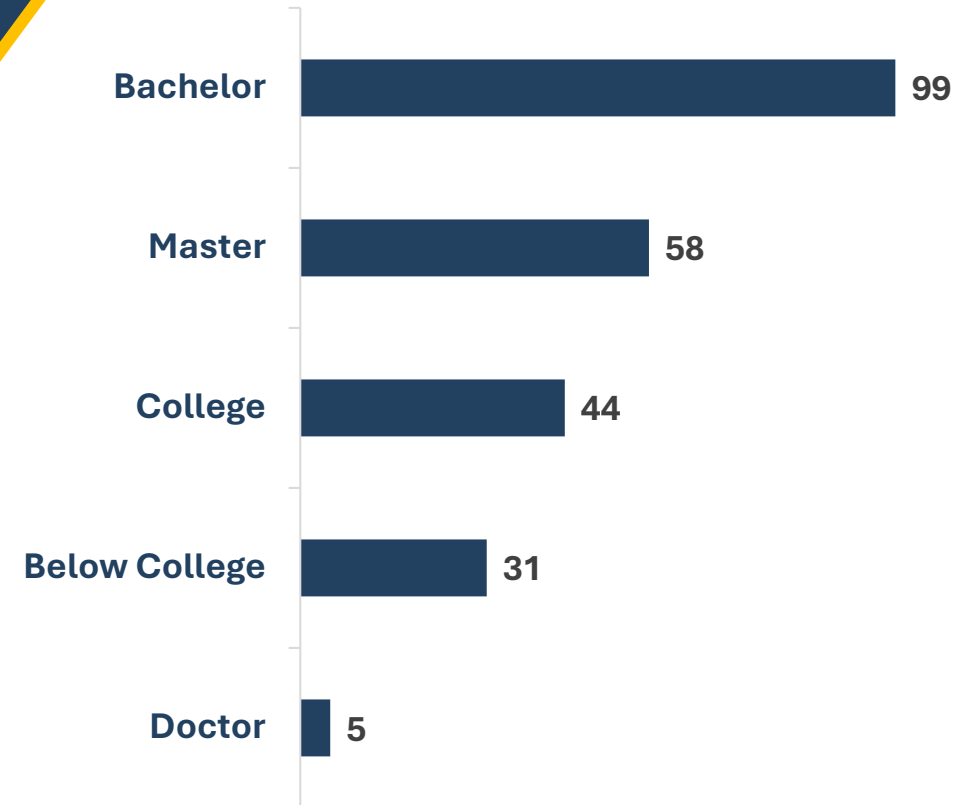

Attrition by Marital Status

INSIGHTS

- Employees with bachelor's and master's degree show higher attrition
- Employees with advanced degree show more stability
- Specialized roles will encourage longer tenure.

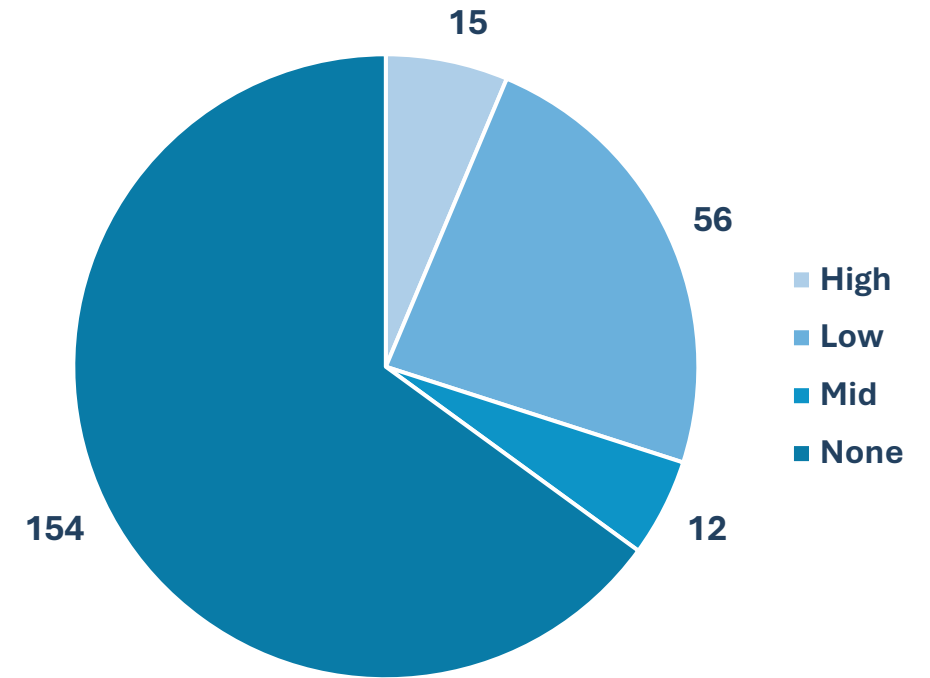

Attrition by Education

INSIGHTS

- Employees without stock options leave more frequently
- Financial incentives will improve employee retention
- Equity benefits will encourage long-term commitment

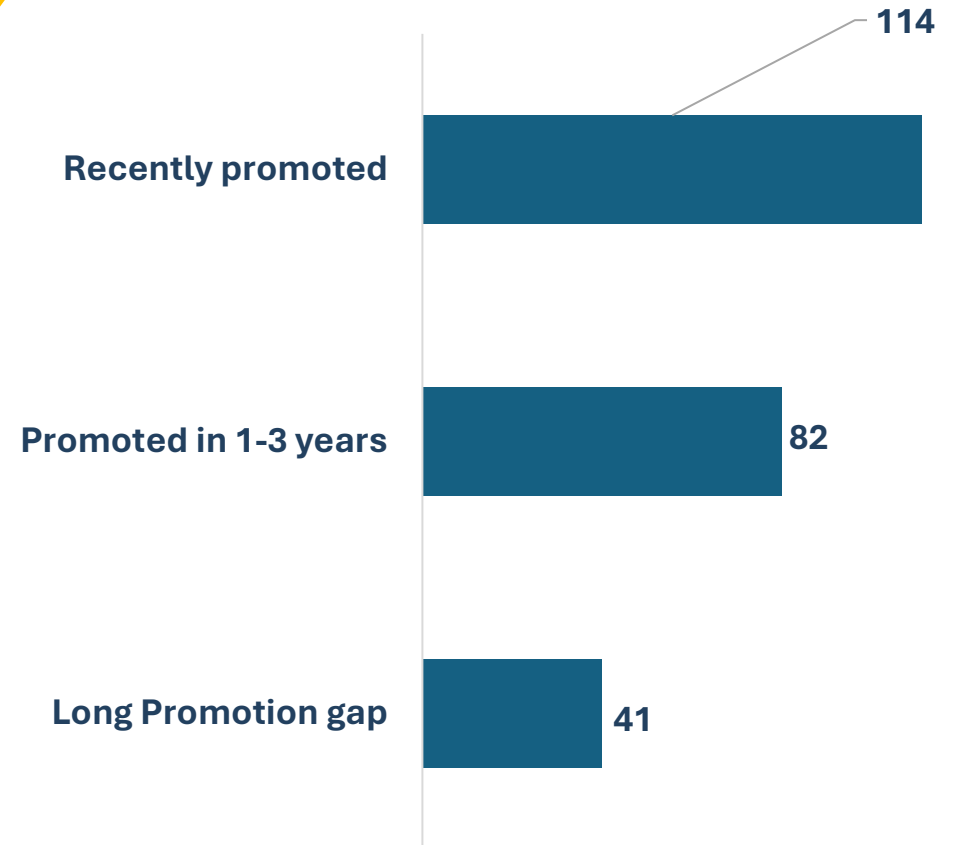

Attrition by Stock Option

INSIGHTS

- Employees recently promoted show high attrition
- Promotion alone does not guarantee employee retention
- Lack of post-promotion support and career clarity contributes to employees leaving

Attrition by Last Promotion

POLICY RECOMMENDATION

- Provide stronger support for younger employees
- Retention incentives for high performers
- Strengthen incentive programs
- Focus on retaining high-risk groups
